The LibSUIT is a totally integrated Information Management System designed specifically for efficient management of a Library. This is achieved by structuring the processes and work flow within a library into functionally independent modules catering to different tasks so as to result into optimum resource management. By launching your Library onto the World Wide Web ensures availability of information geographically from anywhere and at any time. The Library, in effect, becomes a virtual digital information resource in cyberspace.

Cataloguing
This module deals with creation of catalogue or the database. You can add multiple copies, Inter Library Loan books etc. using this module.

Circulation
Issues / Returns of the documents, Reservations etc. are handled by this module. Operators, Membership Logic, Fine Logic, Statistics etc. is handled by this module.

Queries
Searching the information from the database based on title, author etc. is done by this module. Current Awareness Service (C.A.S.), New Arrivals, Latest issues of the Journals etc. are handled by this module.

Serial Control
Periodicals / Journals are handled by this module. Managing the subscription renewals, Missing Issues, Bindery Management is handled under this module.

Acquisition
Procurement of books and other documents is handled by this module.

Setup
This module helps in customising the needs of individual Libraries and also to define the Authority files (Masters).

Fr. Conceicao Rodrigues College of Engg., Bandra (W)

3. Library LibSUIT Transaction Summary (2020)
